things you should know about FRAGRANCES

1 The world’s first chemist was a woman called Tapputi, who made perfumes in Mesopotamia in the 2nd millennium BC.

2 The word ‘perfume’ comes from the Latin per fumum which means ‘through smoke’. The first form of perfume was incense. It was produced from burning wood or plants and was used in religious ceremonies.

3 Ancient Egyptians and Romans created the first liquid perfumes using water and oils. In Rome, perfume was used by both women and men on their bodies and in their houses.

4 Today, perfumes are often called fragrances. A new fragrance appears almost every day, and many of them are promoted by celebrities.

5 When you buy a fragrance, the cheapest thing you are buying is the actual fragrance. The bottle and the box cost more to produce.

6 It is almost impossible to tell the difference between fragrances that have been created for women and for men. The first popular unisex fragrance for both women and men was first sold in 1994.

7 Companies that create perfume for fragrances also make the fragrances that are used for cleaning products, air fresheners and crisps.

8 More than 4,000 ingredients are used in the fragrance industry. The formula of each perfume is kept secret, and the ingredients aren’t listed on the bottle.

9 Some fragrances can cause headaches or allergic skin reactions in some people. Many people don’t like the smell of fragrances and hope they will be banned in public spaces.

3 Read the text and decide if each sentence is correct or incorrect. If it’s correct, write C. If it’s incorrect, write I.
   1 The very first perfumes were oils and water.
   2 New fragrances appear every day.
   3 The world’s first perfume maker was called Mesopotamia.
   4 The first fragrance for men appeared in 1994.
   5 Each fragrance has more than 5,000 ingredients.
   6 The fragrance bottle is often more expensive to produce than the fragrance.

1 Read about Molly’s breakfast. Answer the question at the end of the text.

When Molly had breakfast this morning, her senses were working hard. First, visual messages were sent to her brain. (Eggs on toast! They look good, but maybe they’re bad.) Then some cells which are found in the nose sent another message. (They smell OK up here!) Finally, the thousands of taste buds that are located on the tongue sent a final message. (They taste really nice!) When all the messages were received by her brain, she was given the OK to eat them. Unfortunately Molly has a cold. Tomorrow she’ll be given eggs again, but she won’t be given the OK by her brain. Why not?

Grammar in context

1 Read the story of Braille. Do young people today still use it?

Blind people have restricted or no sight. They depend on their other senses in order to live independently. They use their sense of touch to read Braille. A form of Braille was used by Napoleon’s soldiers so that they could communicate silently at night. But it was a French teenager called Louis Braille who developed the idea so blind people could use it. These days, however, young people prefer using electronic screen readers so that they don’t have to use Braille.

The house is in the middle of nowhere, and there aren’t any shops or cinemas nearby, but we never get bored. There are hills to climb and a huge forest to explore. And there’s the sea as well. We spend hours on the beach. I love the feeling of the wind on my face and the sand under my feet. I also love swimming, although the sea is freezing! My gran is not only one of the coolest people on the planet, but she’s also an amazing cook. There’s always the smell of cooking and baking in the house.
